

Test Paper: Cross-Referencing in Quarto

Your Name

2025-09-09

Introduction

This test paper demonstrates the use of **cross-referencing** in Quarto documents. It includes sections, tables, figures, and code blocks with labels for academic-style referencing.

Refer to the results in Section and the conclusion in `?@sec-conclusion`.

Methodology

We use Python to generate tables and simulate data. Tables and figures are labeled for referencing. See `?@tbl-planets` and `?@fig-elephant` for examples.

Results

Code-Generated Table

The following table presents data on astronomical objects. Reference: `?@tbl-planets`.

```
#| label: tbl-planets #| tbl-cap: Astronomical object data
from IPython.display import Markdown from tabulate import tabulate
table = [
  ["Sun", "696,000", 1.989e30],
  ["Earth", "6,371", 5.972e24],
  ["Moon", "1,737", 7.34e22],
  ["Mars", "3,390", 6.39e23]
]
Markdown(tabulate( table, headers=["Astronomical object
```
